Problem Statement:

How the importance of Economy has changed over time by counting the number of times

"Economy" appeared in PM's speeches? We plan to look at the past 50 speeches.

Solution:

1. Logic
   - Using PM of India website URL link https://www.pmindia.gov.in/en/
   - Find the text speeches which has economy as a key word for past 50 speeches.
   - Manually searching the target will be cumbersome process. So, using Beautiful Soup package for web scraping which extracts target word count for a given website link.
2. Language
   - Python – Web scraping
   - Excel – Data Visualisation
3. Challenges
   - The web scrapping process has lot of restrictions and needs to manual extract date from website.
4. Analysis
   - Max count – 10
   - Min count – 1
   - Highest target frequency used day – 29.Oct.2020
   - Lowest target frequency used day – 7.Dec.2020
